Design telemetry for your application.

What 5 data will your telemetry track?

- Location
- Order cancellation survey.
- What type of food does user access the most.
- Time of the order.
- What social media that mostly use to login.

Implication of the collected data // How to improve your app based on such data?

- We use restaurant that are in vicinity of the user to offer less price of delivery. Or user can pick up for themself with no delivery fee.
- If user cancel their order, system will pop up the questionnaire/survey that ask user why they cancel the order.
- Suggest food/restaurant referenced from what user frequently search for.
- We can use time of the order where most user make the order to know when to send out notification to remind user about new food/promotion.
- We can advertise the app through the social media that user use to log in.

Discuss user privacy and permission of your app

- When User download the app, the user will be asked to allow the app to record their action and track user location. User can turn this off anytime in setting.
